

How to promote Proton

A Guide for Partners

Welcome to Proton

We are excited to start working with you.

Today, over 100 million people use Proton, making us the largest encrypted software platform in the world. As a Proton partner, you're part of our mission to build a better internet.

| Why choose Proton

Proton was founded in 2014 by scientists who met at CERN
(the European Organization for Nuclear Research).

At Proton, we're building an internet where everyone
is in control of their digital lives, and where digital
freedom is a reality. Unlike Big Tech, we believe
privacy is a fundamental human right.

Important reasons to choose Proton

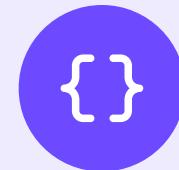

User data is end-to-end encrypted, meaning nobody can access it on our servers, giving technical privacy assurances most tech companies can't offer. [This article](#) provides a simple explanation of how Proton's end-to-end encryption works.

Easy-to-use tools

Easily stay organized and secure, get to your most important emails, files, accounts, and content with Proton's services.

Proton code is open source

Transparent and open source, meaning anyone can check Proton's code, and, our apps have been [audited](#) for security.

Proton for Business

Business solutions are available to help organizations prevent data breaches and comply with data protection laws

Swiss Privacy

Proton is based in Switzerland meaning all user data is protected by the same strict privacy laws that Swiss citizens enjoy. Our data centers are located in privacy-friendly countries including Switzerland, Germany, and Norway.

Owned by the Proton Foundation non-profit

Our business runs on subscriptions, with no venture capital and never collecting nor selling your personal data.

Available on easy-to-use apps for **every device**

Products and key features

Proton is an encrypted ecosystem that helps people protect a broad spectrum of personal data.

Here's an overview of each Proton service, highlighting the unique features and privacy benefits.

Proton VPN

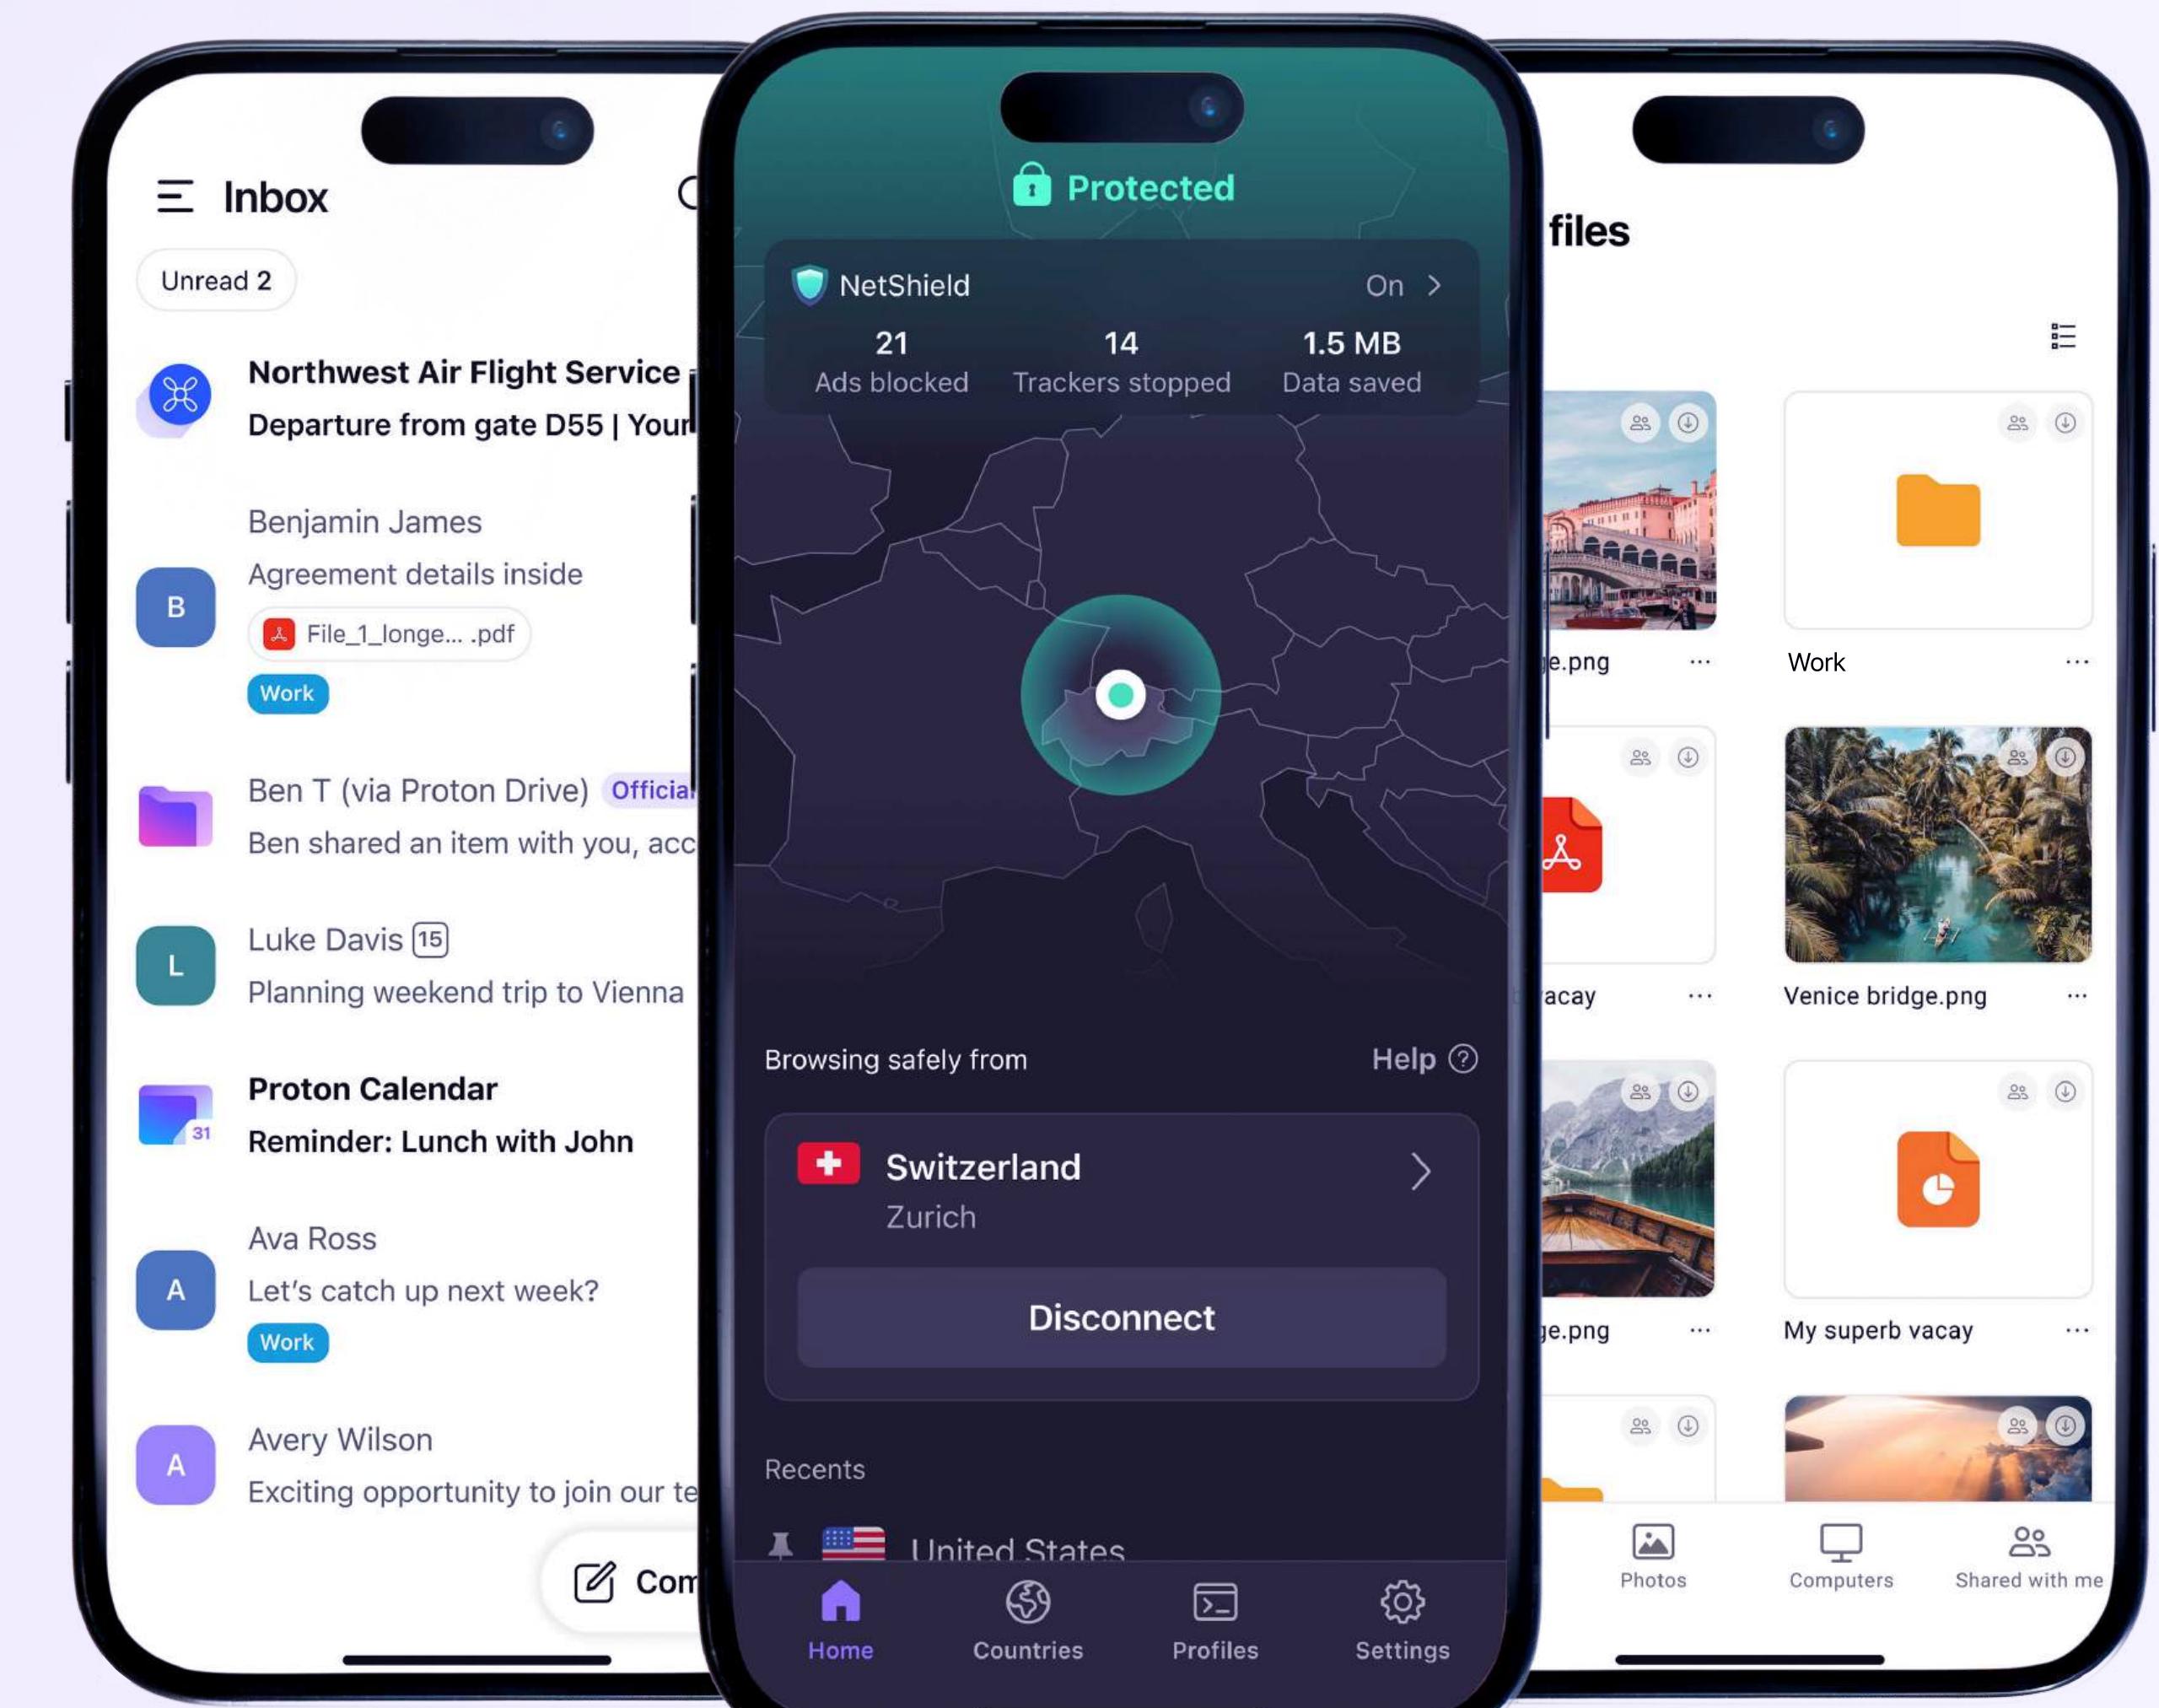

Proton Mail

Proton Pass

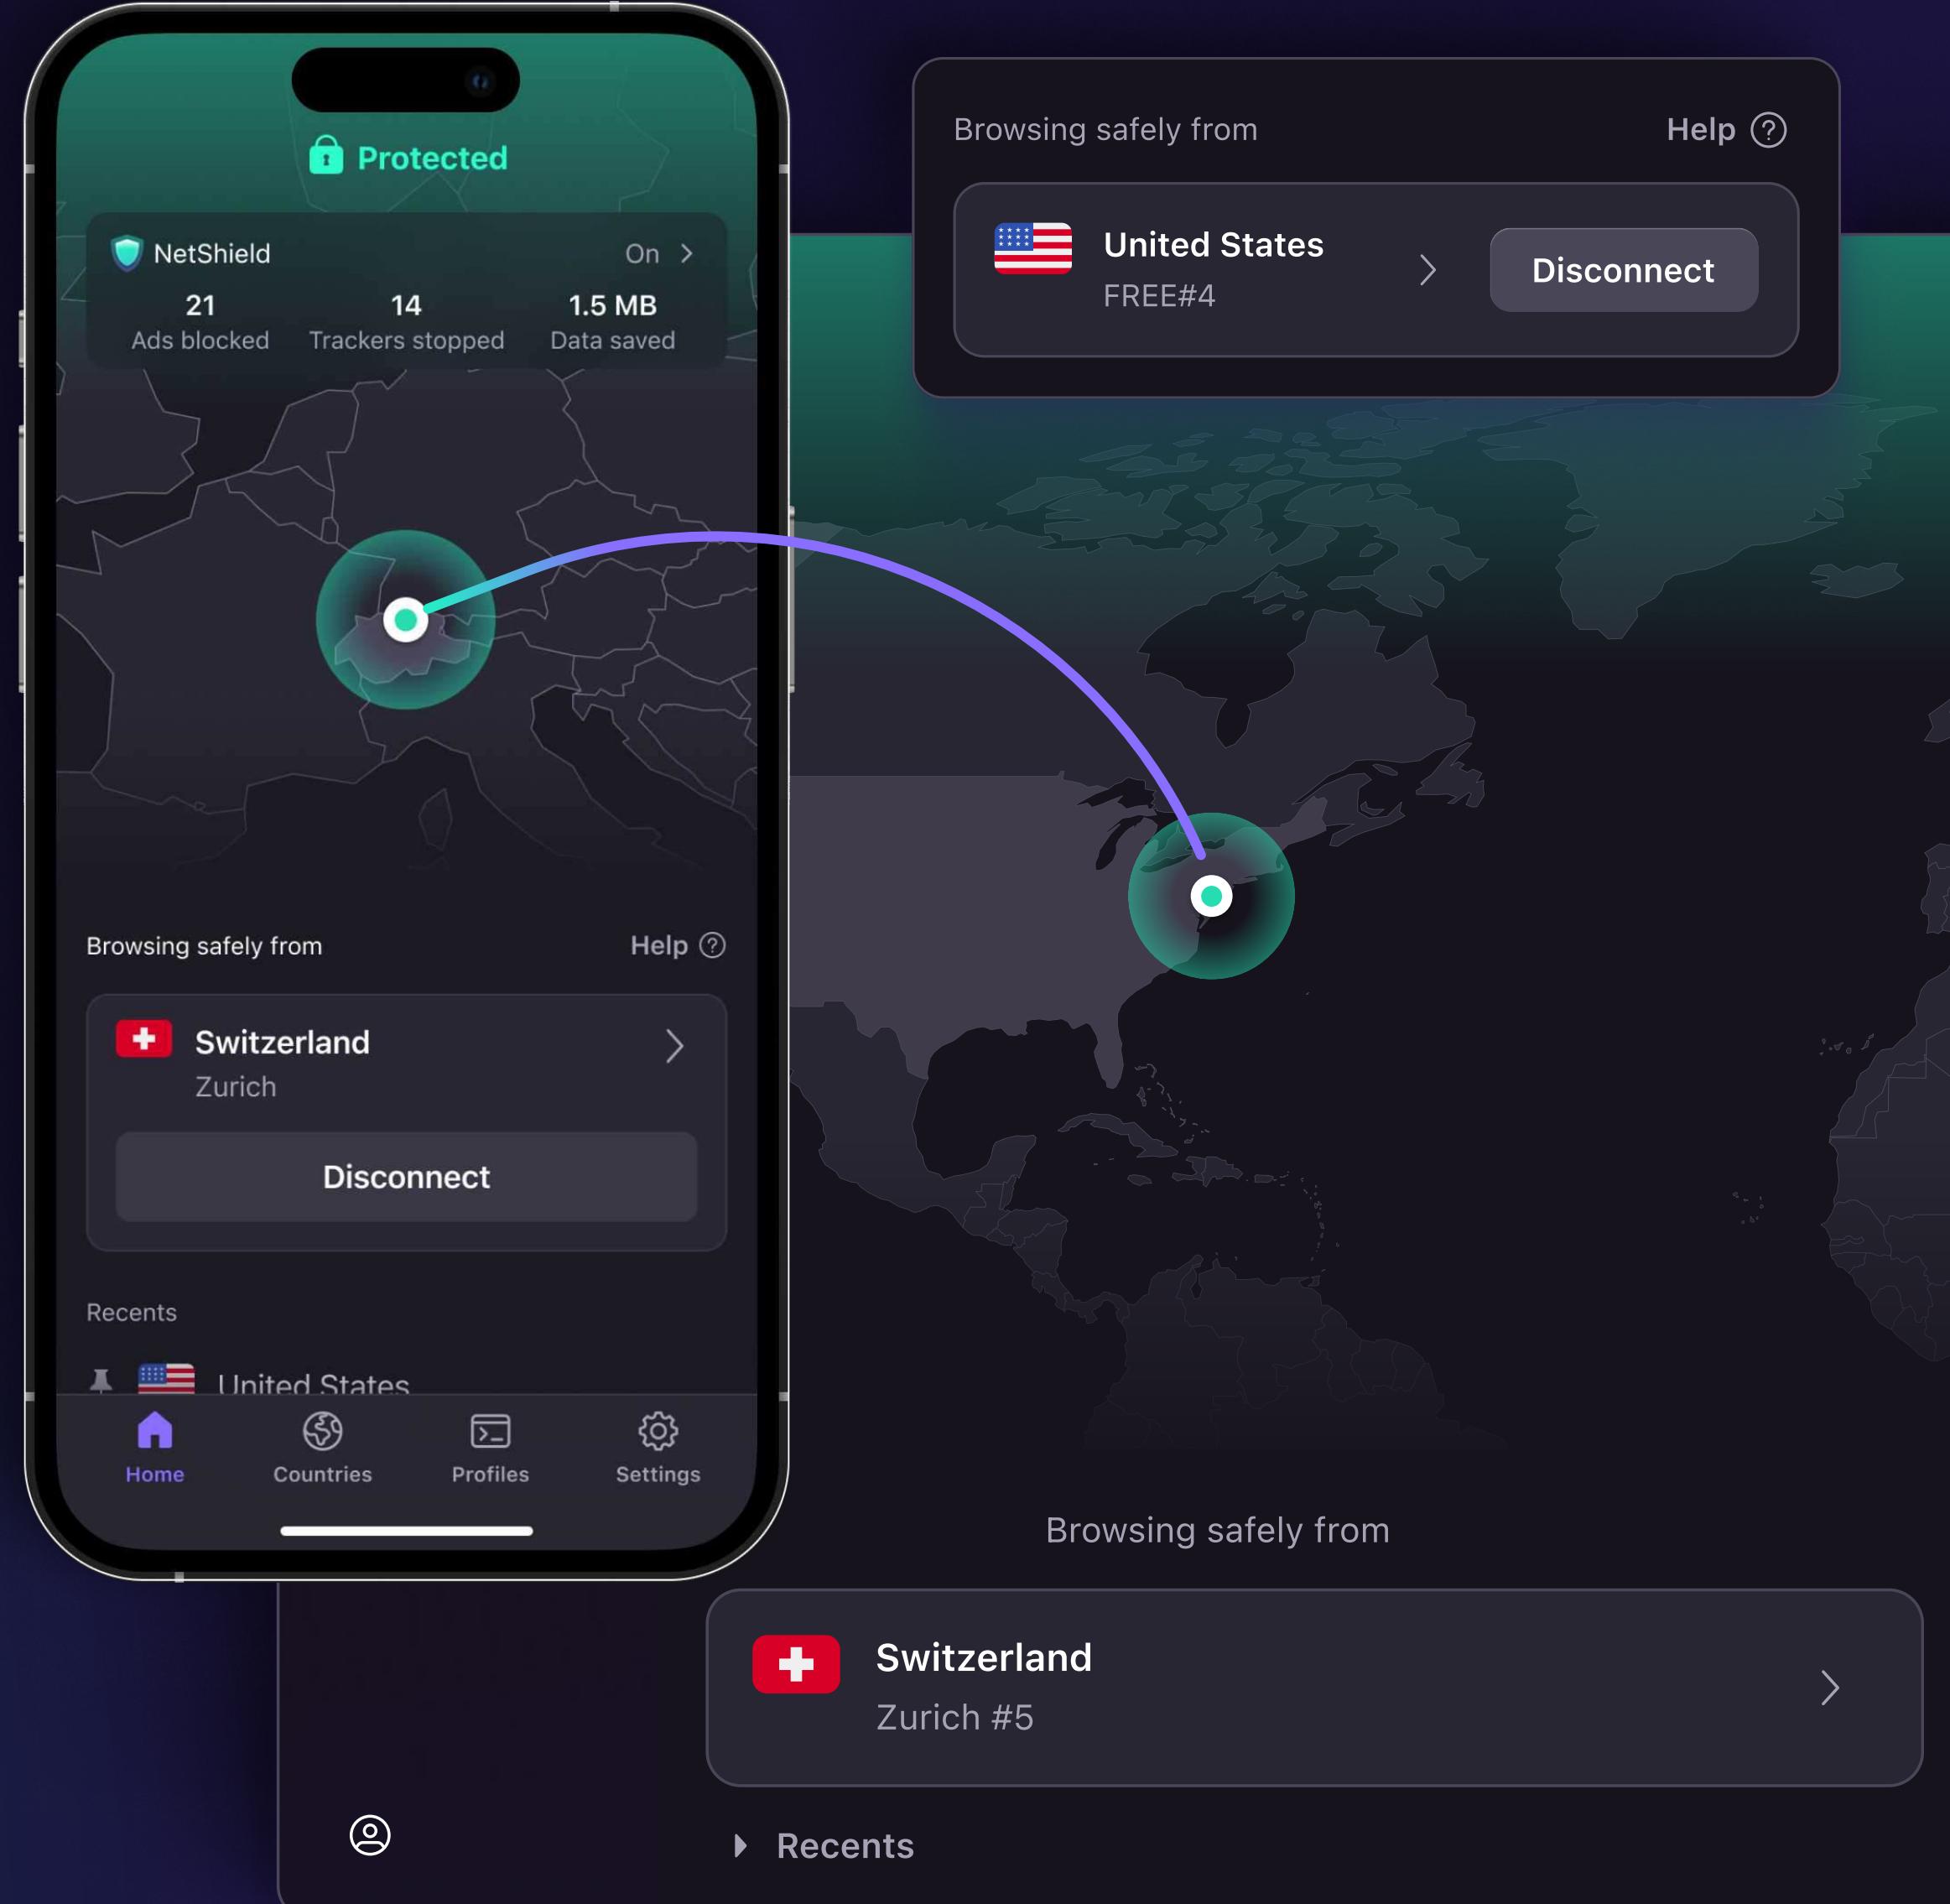

Proton Drive

Proton VPN

Proton VPN lets users protect their **privacy online** and **access content** from anywhere in the world

Available on all platforms/devices: Proton VPN is accessible from any device. We have apps for desktop and mobile, as well as browser extensions.

Worldwide network

15,000+ servers in 122 countries and growing. Our global coverage ensures users can always find a fast, reliable connection wherever they are.*

High-speed performance

Our high-capacity servers and VPN Accelerator technology keep Proton VPN fast and reliable for streaming in 4K, gaming, and everyday browsing.*

Unlock the content people love

Access TV shows, movies, sports, and news from around the world with smooth and secure streaming in 4K, while traveling or at home.*

Integrated Ad and malware blocker

NetShield is a DNS filtering feature that protects you from malware, blocks ads, and prevents website trackers from following you as you surf the web.*

Freedom from censorship

Proton VPN breaks through censorship so users can access information freely and securely. Backed by our Secure Core and encrypted connections, it ensures privacy even in restrictive regions.

P2P downloads

Users can take advantage of port forwarding to dramatically increase download speeds when using P2P file sharing software such as BitTorrent.*

Secure Core

For maximum privacy, Proton VPN routes traffic through hardened servers in Switzerland, Iceland, or Sweden before it leaves our network, adding an extra layer of protection against surveillance.

Proton VPN for Business

Our business VPN gives organizations stronger privacy, security, and control over their network traffic.

Unlimited bandwidth

We place no restrictions on how much data you can use when connected to our service

Click here for a detailed list of all our features

*Premium feature available only on Proton VPN Plus plan

Proton Mail

The **secure inbox** that protects your privacy and helps you stay on top of your emails effortlessly.

**End-to-end encryption:**

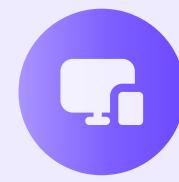

Ensures emails sent between Proton Mail accounts are only accessible to those users. Messages are encrypted on the sender's device and can only be opened using the recipient's private key.

**Zero-access encryption:**

Emails received from non-Proton Mail accounts are encrypted with your public key before reaching your inbox. This ensures no one but you can access them, keeping messages safe from data breaches and surveillance.

**Hide-my-email aliases:**

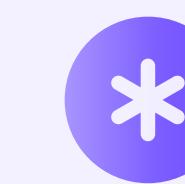

Create aliases when you sign up for new websites to hide your real email address. You can then easily deactivate aliases if they're ever revealed in a data breach or start receiving spam.

**Available on mobile, desktop and web:**

Access your inbox and calendar from all your devices with our dedicated apps. You can even use Proton Mail with other email clients with ProtonMail Bridge.

**Proton Mail for business:**

Our [business plans](#) gives organizations the keys to meeting compliance goals and protecting corporate and customer data. They include dedicated business features and integrations with business applications.

**Password-protected emails:**

Send end-to-end encrypted emails to non-Proton Mail users by setting a password and an optional expiry date.

**Schedule and snooze:**

Schedule emails to be sent exactly when you want, and snooze emails you need to read later.

**Get a clean inbox:**

Easily see and manage all your subscriptions with Newsletters view, and keep things organized automatically with filters.

**Use your own email domain:**

Send emails from your@domain.com.

**Secure your schedule:**

Proton Mail comes with an encrypted calendar to organize your schedule privately.

**Safe from email trackers:**

Proton Mail cleans tracking links and spy pixels to prevent companies from watching what you do in your inbox.

Proton Pass

Proton Pass secures everything
from passwords to personal data
with end-to-end encryption.

The image shows a mobile application interface with a dark theme. A search overlay is displayed at the top, featuring a search bar with placeholder text "Search in all vaults...", a "Cancel" button, and a "Clear" button next to a recent search entry. Below the search bar are four category buttons: "All 154" (highlighted in blue), "Login 100", "Alias 24", and "Notes 7". The main content area displays "Recent searches (5)" with entries: "Proton VPN" (icon: blue triangle), "Netflix" (icon: red 'N'), and "Newsletters" (icon: green car). A tooltip for "List of movies" is visible, stating "Here are the top 30 movies that are a must...". In the foreground, a large semi-transparent overlay prompts the user to "You are about to create" a new account with the email "netflix.3jb55@passmail.com". At the bottom left, a button labeled "Forward to" with the recipient "eric.norbert@proton.me" is shown. The background features a circular purple gradient with a white shield icon, and various service icons like Proton VPN, Netflix, and Amazon are scattered throughout.

Browser, mobile and desktop apps

Proton Pass works across all your devices — iOS, Android, Windows, macOS, Linux —and on all major browsers.

Secure sharing

Easily and safely share passwords, notes, credit cards, or even entire vaults with people you trust.

Share with other Proton Pass users directly through the app (single items or entire vaults)

Or generate a secure, time-limited link to share individual items — no app needed

File attachments

Attach files to any item — like backup codes, ID documents, or recovery keys — keeping them accessible and end-to-end encrypted.

Custom items

With Proton Pass you can store more than just logins, notes, or bank cards. Choose from built-in templates like bank account, passport, or Wi-Fi — or create items with custom fields tailored to your needs.

Passkeys Support

Passkeys give you a secure, convenient alternative to passwords that help prevent phishing attacks and make your logins easier.

Integrated two-factor authenticator (2FA):

Keep your accounts safe with 2FA and enjoy the convenience of a built-in authenticator that generates and autofills your codes.

Hide-my-email aliases

Generate random, unique email addresses you can use to sign up for new accounts and newsletters instead of your real address. This helps you control spam, reduce phishing attempts, and stay more anonymous online.

Emergency Access

Give trusted contacts emergency access to your account. You control how and when — instantly or after a custom wait time.

Pass Monitor and Dark Web Monitoring

Stay safe from online threats with a security suite that protects your accounts. Use Password Health to check for weak or reused passwords, get alerts if your data appears on the dark web, and be notified if any of your accounts are missing 2FA.

Proton Sentinel

Proton Pass Plus plans include our Proton Sentinel high security program, which uses machine learning and human security analysts to monitor for and block account takeover attacks.

Proton Drive

Encrypted cloud storage that keeps files and photos private and secure

Business Plan

End-to-end encrypted

Secure storage

Keep photos and documents in one place protected from data breaches, surveillance and training AI models.

Files stored with encryption

End-to-end encryption means, unlike Google and Microsoft, Proton can never read any file, see your photos or sell user data for advertising. Your data remains fully owned, accessible, and controlled by you.

Easily find files

Organize documents into folders and search through up to 1TB of storage, depending on the plan.

Protect and organize photos

Automatically back up photos and organize them into secure albums. Memories are ready to revisit anytime, from anywhere.

Secure file sharing

Send files of any size or type to anyone, fully protected by end-to-end encryption— even if they don't have a Proton Drive account.

File sharing on your terms

Proton Drive lets you stay in control with passwords, expiring links, and the ability to revoke access at any time.

Collaborate in real time

Write, edit, and share ideas with Drive's online document editor. Proton Docs keeps everyone in sync while keeping data safe.

Access your files from anywhere

Manage files across devices with Windows, Mac, Android, and iOS apps.

Encrypted cloud storage for businesses

Collaborate on documents, securely store and share files within your organization while controlling permissions and data access.
